KOKKACO JOBAGENT

User guide: from setup to your first tailored application

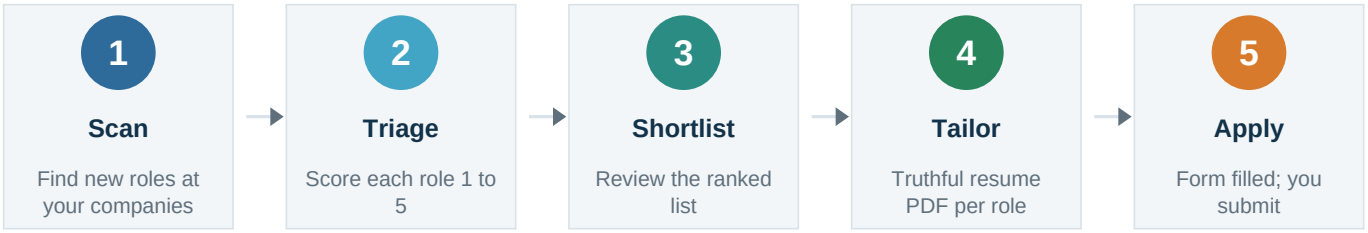
STEP-BY-STEP OPERATING GUIDE

Discover | Evaluate | Tailor | Apply

Version 0.1 | October 2026

WHAT IT DOES jobagent finds open roles at the companies you choose, scores how well each one fits you, rewrites your resume toward the best ones **using only what is true**, and fills the application form for you to review. You stay in control of every submission.

THE WORKFLOW AT A GLANCE



OPERATING PRINCIPLES

- **Truthful by design.** The tool may rephrase your real experience in the job's language. It cannot add skills, tools or numbers you never had. Code checks every rewrite and reverts anything that fails.
- **You submit.** Form filling runs as a dry run in a visible browser. It stops at captchas and never ticks legal attestation boxes.
- **Cheap filters first.** Deal-breakers (no visa sponsorship, clearance, years required) are checked in code before any AI call is spent.
- **Nothing is lost.** Every job seen is stored once, with the reason it was kept or filtered.

ALREADY INSTALLED ON THIS MACHINE

Component	Status
Claude CLI (AI engine)	Ready, no API key needed
LaTeX engine (tectonic)	Ready, builds the PDFs
Playwright + Chrome	Ready, fills forms
jobagent command	Installed in ~/.local/bin

Confirm at any time with:

```
jobagent doctor
```

WHERE EVERYTHING LIVES

Project folder: `~/Documents/KokkaCo_Corperate_Strategy/KokkaStrat/jobagent`. Open a terminal there before running any command.

File / folder	What it is	You edit it?
jobagent/profile/resume_content.yaml	Your master resume as structured data	Yes: step 1
jobagent/profile/standard_answers.yaml	Answers every application form asks	Yes: step 2
jobagent/profile/search.yaml	Companies, filters and target roles	Yes: step 3
data/generated/<Company_Title>/	Tailored PDFs and reports per job	No: output
data/jobagent.db	Tracker database (jobs, scores, applications)	No: managed

PART 1 | ONE-TIME SETUP

TIME TO FIRST RESULT

About 1.5 hours of one-time setup, mostly writing your resume file. After that, about 15 minutes a day to scan, review the shortlist and tailor.

1 Write your master resume

30 to 60 minutes

Open `jobagent/profile/resume_content.yaml` in a text editor and replace every placeholder with your real details. This is your **master**. The tool never changes it; it creates a tailored copy for each job.

```
name: "Your Full Name"
headline: "Strategy & Operations | Ex-Consulting"
email: "you@example.com"
experience:
  - company: "KokkaCo"
    title: "Strategy Lead"
    start: "2024"
    end: "Present"
    bullets:
      - id: "kokka-1"          # short, unique, never reuse
        text: "Built a 3-statement model that informed a $10M decision."
```

TWO RULES THAT MAKE TAILORING WORK

Include everything true, even bullets you would normally cut. The tool can only select and rephrase what is in this file.
Put real numbers in the bullets. A tailored bullet is never allowed to add a number that is not already in the original.

Check that the file loads correctly:

```
python3 -c "from jobagent.profile_loader import load_resume; print(load_resume().name)"
```

2 Fill in your standard answers

10 minutes

Open `jobagent/profile/standard_answers.yaml`. These are the questions every application form repeats. The form filler uses them, and your sponsorship answer also tells the evaluator whether to skip roles that will not sponsor a visa.

Section	What to enter
personal	Name, email, phone, city, state, country, LinkedIn, website
work_authorization	authorized_to_work (true/false), requires_sponsorship (true/false), visa_status
preferences	Salary expectation (or leave blank), start date, relocation, Remote / Hybrid / Onsite
eeo	Gender, ethnicity, veteran, disability. "Decline to self-identify" is fine.

3 Choose companies and target roles

15 minutes

Open `jobagent/profile/search.yaml`. The values there now are examples only. Replace them with your own.

Adding a company. Open its careers page, click any job, and read the web address:

If the job URL looks like	Add this line under companies:
job-boards.greenhouse.io/stripe/jobs/...	`{name: Stripe, ats: greenhouse, board: stripe}`
jobs.lever.co/palantir/...	`{name: Palantir, ats: lever, board: palantir}`
jobs.ashbyhq.com/ramp/...	`{name: Ramp, ats: ashby, board: ramp}`

Setting	What it controls
titles	Words a job title must include (any one) or must not include
locations	Allowed and blocked locations; remote roles pass by default
max_posting_age_days	Ignore postings older than this
hard_filters	Your real years of experience, and whether you hold a security clearance
targets	The 2 to 4 kinds of role you actually want. A job matching none of them is capped at a low score.

WORKDAY AND OTHER SITES

Workday career sites cannot be scanned yet. You can still paste any job URL into evaluate or tailor (Part 2).

SETUP CHECKLIST: BEFORE YOU CONTINUE

- [ ] Every placeholder in resume_content.yaml replaced; each bullet has a unique id
- [ ] Real numbers written into the bullets that have them
- [ ] The load check from step 1 prints your name
- [ ] Work authorization and sponsorship answers are correct in standard_answers.yaml
- [ ] search.yaml lists your companies, not the examples
- [ ] targets describes the 2 to 4 roles you actually want
- [ ] hard_filters.years_experience is your real total
- [ ] jobagent doctor shows no red items

PART 2 | YOUR FIRST RUN

4 Test on one job you know well

10 minutes

Pick a posting you understand, ideally one you would be strong for, so you can judge whether the output makes sense. Run:

```
jobagent evaluate "<job url>"   # fit score with evidence per requirement
jobagent tailor "<job url>"     # tailored resume PDF + report
```

Then open `data/generated/<Company_Title>/` and review three things:

Output	What to look for
resume.pdf	Your tailored resume. Read every bullet as a recruiter would.
Gap list (report.json)	What the job wants that your resume does not support. Do not claim these unless they are genuinely true.
Reverted bullets	Rewrites that failed the truthfulness check. Your original text was kept instead.

IF THE EVALUATION FEELS WRONG

The fix is almost always in your inputs: a missing bullet in resume_content.yaml, or targets in search.yaml that do not describe what you want. Edit them and run evaluate again.

HOW A JOB IS SCORED

Evaluation runs in four stages, cheapest first, so the score is consistent from run to run:

Stage	What happens
1. Hard stops	Deal-breakers read from the job text (no sponsorship when you need it, clearance, far more years than you have). Any hit means skip, with no AI cost.
2. Requirements	The AI lists the job's requirements and how important each is, **before** it sees your resume.
3. Evidence	Each requirement is marked stated (must cite a real bullet), inferred, or none.
4. Score	Weighted 1 to 5: resume match 40%, target fit 30%, level 15%, pay 15%. Capped at 3.4 if a critical requirement is unmet.

4.0 AND ABOVE

Apply. Tailor and apply.

3.5 TO 3.9

Consider. Needs a clear reason.

BELOW 3.5

Skip. Spend the time elsewhere.

PART 3 | THE DAILY ROUTINE

5 Run the daily loop

About 15 minutes a day

Once setup is done, this is the whole routine:

```
jobagent scan                 # find new roles at your companies
jobagent triage --limit 10    # score them (about 2 AI calls each)
jobagent jobs                 # ranked shortlist, score 3.5 and up
jobagent jobs --show <url>    # full breakdown for one role
jobagent tailor <url>         # tailored PDF for the ones worth it
jobagent apply <url>          # fill the form; you review and submit
```

YOUR FIRST SCAN

The first scan queues every role currently open, so run triage a few times to work through the backlog. After that, each scan brings in only roles posted since the last one.

6 Apply with a human check

5 minutes per application

`jobagent apply <url>` opens the application in a visible Chrome window and fills it from your standard answers, uploading the tailored PDF. Greenhouse forms are supported today.

- **Review every field.** The terminal lists sensitive answers (work authorization, salary, EEO) and any questions it could not answer.
- **Tick attestation boxes yourself.** The tool never ticks "I certify..." boxes.
- **Click Submit yourself**, then press Enter in the terminal to close the browser.
- Use `--live` only once you fully trust the fills. It still asks for confirmation and still stops at captchas.

PART 4 | REFERENCE

COMMAND REFERENCE

Command	What it does
`jobagent doctor`	Checks the AI engine, LaTeX, browser and data folder
`jobagent scan [-c Company]`	Polls job boards in search.yaml; -c limits to one company
`jobagent triage [--limit N]`	Scores up to N queued roles (default 10)
`jobagent jobs [--min-score X]`	Ranked shortlist; --show <url> for details
`jobagent evaluate <url>`	Scores any single posting
`jobagent tailor <url>`	Builds the tailored resume PDF and report
`jobagent apply <url>`	Fills the form (dry run by default)
`jobagent status`	Lists tracked applications

TROUBLESHOOTING

Symptom	Fix
Something will not run	Run jobagent doctor and fix anything marked red.
First scan finds 0 new roles	Title or location filters are too narrow. Widen titles.include or locations.allow in search.yaml.
A good role was filtered out	See why: sqlite3 data/jobagent.db "select title, reason from jobs where status='filtered' limit 20"
"Posting is closed"	The role was taken down. The tool will not tailor for dead postings.
Many bullets reverted	Your master resume is missing detail. Add the true experience, then re-run tailor.
"No adapter for ATS"	Only Greenhouse forms can be filled today. Use the tailored PDF and apply by hand.

GLOSSARY

Term	Meaning
ATS	Applicant tracking system: the software behind a company's job board (Greenhouse, Lever, Ashby, Workday).
Board slug	The company's short name in its job-board web address, e.g. stripe in job-boards.greenhouse.io/stripe.
Hard stop	A deal-breaker stated in the job text. The role is skipped without an AI call.
Gap	Something the job asks for that your resume does not support. Listed, never invented.
Dry run	The form is filled but not submitted. This is the default for apply.

GOLDEN RULES

Never claim a gap that is not true. | Always review before you submit. | Fewer, better-fit applications beat volume.
